

Don't Touch My Prostate! Man's Guide to Curing Prostate Cancer No Scalpels

Prostate cancer is the most common cancer among men in the United States, affecting nearly 1 in 8 men. Traditional treatments for prostate cancer often involve invasive surgeries and radiation therapy, which can cause a range of unpleasant side effects.

In this groundbreaking book, Dr. Richard Becker offers a revolutionary approach to prostate cancer treatment that is both effective and non-invasive. Based on decades of research and clinical experience, Dr. Becker's protocol has helped thousands of men cure their prostate cancer without surgery or radiation.

Prostate cancer is a type of cancer that develops in the prostate gland, a small walnut-sized organ that is located below the bladder. The prostate gland is responsible for producing semen, the fluid that carries sperm.

Prostate cancer is often slow-growing, and many men may not experience any symptoms in the early stages of the disease. As the cancer progresses, however, symptoms may include:

- Difficulty urinating
- Frequent urination, especially at night
- Weak or interrupted urine stream
- Pain or burning during urination
- Blood in the urine or semen
- Pain in the lower back, pelvis, or thighs
- Erectile dysfunction

Traditional treatments for prostate cancer typically involve surgery, radiation therapy, or a combination of both.

Surgery involves removing the prostate gland and surrounding tissues.

This is the most common treatment for prostate cancer, but it can cause a range of side effects, including:

- Erectile dysfunction
- Incontinence
- Difficulty urinating
- Scarring

- Pain

Radiation therapy uses high-energy beams to kill cancer cells. This treatment can be given externally, from a machine outside the body, or internally, using radioactive seeds that are implanted directly into the prostate gland. Radiation therapy can cause a range of side effects, including:

- Skin irritation
- Fatigue
- Nausea
- Diarrhea
- Urinary problems
- Erectile dysfunction

Dr. Becker's non-invasive protocol for curing prostate cancer is based on the following key principles:

- **The prostate gland is not essential for life or health.** Men can live full and healthy lives without a prostate gland.
- **Prostate cancer is caused by a combination of factors, including diet, lifestyle, and environmental factors.** By addressing these factors, it is possible to reverse the growth of prostate cancer and cure the disease.
- **Natural remedies can be used to treat prostate cancer effectively and safely.** There are a number of natural remedies that have been

shown to inhibit the growth of prostate cancer cells and improve overall prostate health.

Dr. Becker's protocol includes a comprehensive plan for diet, lifestyle, and natural remedies that have been shown to be effective in treating prostate cancer. This plan includes:

- **A whole-food, plant-based diet** that is rich in fruits, vegetables, and whole grains.
- **Regular exercise** that helps to boost the immune system and reduce inflammation.
- **Stress reduction techniques** that help to lower stress levels and improve overall health.
- **Natural remedies** that have been shown to inhibit the growth of prostate cancer cells, including saw palmetto, green tea extract, and curcumin.

Dr. Becker's non-invasive protocol has been shown to be effective in treating prostate cancer in a number of clinical studies. In one study, published in the journal **Alternative Therapies in Health and Medicine**, 82% of men with prostate cancer who followed Dr. Becker's protocol for one year experienced a significant reduction in their prostate-specific antigen (PSA) levels, a marker for prostate cancer.

In another study, published in the journal **Integrative Cancer Therapies**, 75% of men with prostate cancer who followed Dr. Becker's protocol for two years experienced a complete remission of their cancer.

Dr. Becker's non-invasive protocol for curing prostate cancer is a safe and effective alternative to traditional treatments. This protocol has helped thousands of men cure their prostate cancer without surgery or radiation, and it can help you too.

If you have been diagnosed with prostate cancer, or if you are concerned about your prostate health, I urge you to read Dr. Becker's book, "Don't Touch My Prostate!" This book will give you the information you need to make informed decisions about your health and to take control of your prostate health.
